.....
??????????

I actually haven't either. I know Rob Parsons who initiated this email, but he's not contacted me about this.

For uplands work Rob was the GIS developer of the PHAST tool and did the EVS subsurface modeling of RP data when we reviewed their 10,000 page RI/SCE report.

I will find out more from him about what he is doing.

Scott

What are you guys up to? Why have I not been involved in this?

Subject: FW: FW: Geoplatform Info

Hi Kristine:

I'm part of this bizarro e-mail chain that originated from CDM. I think what CDM is looking for is some way/place to publish Portland Harbor geospatial layers? It appears the question they are asking is if they can use the EPA Geoplatform as their publishing environment. Utilizing an existing EPA hosting environment would result in significant cost savings over having them publish these data in their own environment, but there are other things to consider besides cost and other options besides the Geoplatform.

I assume you are the "client is hiding somewhere in R10 superfund" that is mentioned. James and I are wondering what involvement you would like from us. There are many options on how to publish the info. I do not know what direction you have given CDM and what expectations you have. My suggestion would be to hear from you what you want to accomplish and then we can work with CDM, if that is what you want and what is best. At the other end of the spectrum, we can butt out of this entirely.

Just let me know if you would like James and I to follow-up w/ CDM, and if so, in what way.

Thanks.

Scott Augustine

I know but the client is hiding somewhere in R10 superfund. The site he wants to publish his services for is Portland Harbor. Hope all is well.

Hi Rob,

It was nice talking to you. As we discussed I see two options - I help you and your EPA clients publish the site data as a service via either the Federal Geoplatform or EPA's Geoplatform. I've copied the EPA R10 GIS coordinator and the EPA GIO as I'd like their opinion on which option works best for EPA. From a technology standpoint given your requirements - AGOL would work best and is in both environments so it is really a preference. Both environments only support data up to FISMA Low at this point. I'll let you know which way EPA wants to go.

Take care,

I'll call him since we don't limit who can receive an identity it doesn't really matter. I'm guessing however this is a mistake of identities. His contract probably said they had to use the geoplatform however it's likely the EPA Geoplatform ala AGOL. stay tuned

Subject: Geoplatform Info

I wanted to ask about access for contractors under federal contract. Can we obtain access to support EPA projects currently under the RAC Region 8 contract with EPA? The reasoning is to use currently available government resources to support projects under this and other federal contracts. We are being asked to develop GIS applications for projects within region 8 and other regions as well as other agency contracts we currently hold. Would this access, if available, require a host representative of EPA or other federal agency? With this platform in place a significant cost savings would be realized under these contracts if access were available.

Please let me know if further discussions or information is required. If this is the wrong contact source who would we need to contact to discuss?

Thanks,
